Adriana Smock

Power BI Developer | Semantic Models · DAX · SQL · Snowflake

Eagle Mountain, UT · (385) 349-6530 · adrianasmock@gmail.com · LinkedIn
www.linkedin.com/in/adriana-smock/

Summary

Power BI developer and analyst with 4+ years of hands-on report and data model development and 7+ years in analytics and operations. Independently takes reporting from requirements to deployed dashboards: gathers needs from Sales, Finance, and Operations leaders, builds star-schema Power BI semantic models with advanced DAX (including time intelligence) on SQL and Snowflake data, secures them with row-level security, tunes them for performance, and publishes executive dashboards teams use to run the business. Standardizes KPI definitions and data mappings across systems so numbers stay consistent, and automates recurring reporting with Power Automate (8+ hours saved weekly). Experience spans financial, operational, and workforce reporting in CPG, logistics, and manufacturing.

Technical Skills

- **Power BI:** Power BI Desktop, Power BI Service, semantic models, DAX (including time intelligence), Power Query, row-level security, DirectQuery and composite models, Tabular Editor
- **Data:** SQL, Snowflake, Excel, ERP data (Sage X3), SPINS syndicated data
- **Modeling & reporting:** dimensional modeling (star schema), model and report performance optimization, KPI definition and standardization, forecast-vs-actual and variance reporting
- **Automation:** Power Automate, scheduled reporting, data-driven alerts
- **Reporting domains:** financial, operational, sales, inventory, and workforce

Professional Experience

Senior Sales and Operations Analyst — Bonafide Provisions · Remote · May 2026 – Present

- Design, build, and maintain star-schema Power BI semantic models, DAX measures (including time intelligence), and executive dashboards integrating sales, forecast, open-order, and distributor data, from requirements through deployment.
- Define KPIs with Sales, Finance, and Operations leaders and standardize customer and product mappings across systems, giving leadership one consistent set of numbers.
- Implement row-level security to control report access, optimize models and reports for performance with Tabular Editor, and maintain forecast history for forecast-vs-actual tracking.
- Automated recurring reporting and alerts with Power BI Service and Power Automate, saving 8+ hours per week and moving teams to exception-based follow-up.
- Built inventory management reports, distribution trackers, and pricing analyses, and lead variance investigations that explain performance gaps.

Sales & Operations Analyst — Better Butter · Salt Lake City, UT · Jun 2024 – Jun 2026

- Built and maintained Power BI dashboards end to end for Sales, Operations, Finance, Procurement, and leadership on SQL and Snowflake data, covering sales performance, inventory visibility, and three-month material planning.
- Used SQL in Snowflake to source and shape reporting data for Power BI models.
- Analyzed SPINS syndicated and internal sales data by customer, SKU, and promotion to measure forecast performance.
- Ran variance and root-cause analysis for demand planning and customer business reviews, and maintained Sage X3 ERP records to keep source data accurate.

Logistics Data Analyst — Global Access · Lehi, UT · Mar 2022 – Jun 2024

- Built Power BI dashboards tracking logistics KPIs across shipping, carrier, cost, and delivery data.
- Identified root causes of undeliverable international shipments and partnered with Operations and Customer Service on fixes, helping cut them 20% in one year.
- Investigated and resolved data-accuracy discrepancies with Operations and Customer Service to improve reporting reliability.
- Partnered with IT during the company's expansion from logistics into e-commerce, translating system-improvement needs and customer requests into 10–20 IT tickets per week.

Night Shift Packaging Department Supervisor — CSB Nutrition Corporation · Spanish Fork, UT · Jun 2019 – Mar 2022

- Tracked throughput, labor productivity, and quality metrics to find and reduce bottlenecks.
- Led packaging teams of 20–25 (up to 40 at peak), coordinating schedules and priorities with Planning and Inventory.
- Trained 40+ team members during peak seasons on packaging processes and standards.

Education & Training

- Master's in Management and Productivity — Universidad APEC
- BS in Marketing — Universidad del Caribe
- Applied Data Science with Python Specialization — Coursera (in progress)
- SQL Foundations — Microsoft, 2025
- Data Analysis with R Programming — Google, 2024
